

PATIENT TRACKING TRAIN-THE-TRAINER ACTIVITIES

Mass Casualty Incident (MCI) Scenario:

At this very moment, you are informed of a commercial bus accident involving a Greyhound bus travelling from North Carolina, transporting a group of Veterans and their family members to the National D-Day Memorial located in the town of Bedford. There are a total of 40 people on the bus, including the driver. First Responders arrive on scene and advise further that there are a total of 20 casualties. There are 8 confirmed fatalities and 12 other casualties, with a variety of injuries, requiring transport to a medical facility for further treatment.

Activity 1: The accident has taken place in your jurisdiction. You are tasked with **entering** patients into the *Patient Tracking* system in VHASS as they arrive at your facility. Use the data provided to you on the incoming patient Triage Tags. (You are the initial receiving facility.)

Activity 2: After initial treatment and stabilization at your facility, you are tasked with **transferring** in the VHASS *Patient Tracking* system, some of the MCI/Bus Accident patients out of your facility and in to other facilities in the region for continued care and treatment. (Practice transferring patients now.)

Activity 3: Your facility is now receiving some of the patients involved in the MCI/Bus Accident who were initially taken to another facility from the scene. As patients arrive, you have been tasked with **updating** the *Patient Tracking* system in VHASS to reflect the most current information/details that are available for these incoming patients. (View the list of all patients transferred to your facility and update/edit, as needed. **BE CREATIVE** and make some changes!)

Activity 4: Final Disposition of patients- Transfer one of your patients to the **NSW Test Hospital** and document that all other patients from the MCI are no longer in your facility and have been sent home.
